This talk will outline three generalized types of work: labor, coordination, and knowledge. The differences in being productive for each group will be discussed. Specific strategies and methods for being a productive knowledge worker will be discussed in detail.

You are a knowledge worker if you:
- conduct academic research,
- commonly face inconsistent challenges involving data,
- you can complete your tasks alone,
- and you can work from many physical locations.

Dan Carver is a GIS Specialist in the Natural Resource Ecology Laboratory at CSU. He enjoys long walks, short introductions, and providing scientific presentations that you don’t need to be an expert to enjoy.

The Geospatial Centroid is committed to facilitating campus-wide education, outreach, and research in geospatial sciences.
